

Lifts all sizes and brands of both American and European carts as well as most sizes and brands of larger 4-wheeled containers of up to (290 gal – 1100 liters).

Original Gingras sweeping action automatically adjusts to varying heights and uneven terrain allowing operators to mount carts easily and securely onto the Tipper lifting hook.

Lower maintenance costs and quick parts replacement thanks to a durable welded steel construction and a modular bolted design that uses the minimum number of moving parts.

Meets most North-American standards.

High-quality welding and safety yellow powder coated finish provide the most durable and best quality finishes in the industry.

Compact installations (can mount 2 lifters on the same rear loader for increased productivity) with enough clearance for commercial carts and unrestricted access to the hopper area for hand loading.

Rust-proof Arcor-treated cylinder rod.

Industrial grade welded hydraulic cylinders with replaceable seals rated at 2,500 psi maximum operating pressure will keep costs low and maintenance a snap.

Spring-loaded rotating lower latching mechanism retracts fully inside faceplate after cycling, never requires adjustment, will not damage lift bars on carts.

A 50 degree dumping angle eliminates cart wear due to shaking, empties carts quickly and effectively on every cycle thus increasing collection efficiency.

Engineered lower latch hook firmly locks cart to Tipper, reduces cart sliding back and forth and minimizes cart travel into the hopper.

UHMW lifting teeth and header gently lift carts and containers securely without scratching and help prevent cart wear.

Dumps deep inside the hopper to prevent spillage and higher to increase hopper capacity thus reducing the need to cycle the packer blade.

Manually-disengaged lower latch hook on two way systems eliminates damage to Euro carts.

Mounts on a standard bolt-on removable mounting plate with minimal sill modifications, for quick installation, easy maintenance and fast replacement.

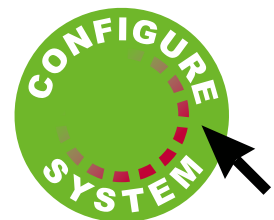

Self-lubricating composite plastic spherical bearings and bushings at main pivot points and cylinder rod ends ensure a lifetime of low maintenance.

Adapts to just about any rear or side loader, requires less lateral space and allows close access to containers on the curb.

Robust steel construction is rugged enough to lift even the heaviest containers weighing as much as 3,000 lbs.

Thin profile, works with commercial "cable lift" or "kick bar" style container latch kits, tipper bars or overhead winch mechanisms on rear loaders.
